# Advanced Web Development Syllabus

### Contact Info

While going through the program, if you have questions about anything, you can reach us at support@udacity.com. For help from Udacity Mentors and your peers visit the Udacity Classroom.

## Nanodegree Program Info

**Version**: 1.0.0

Length of Program: 77 Days\*

## Part 1: Introduction to the Program

Welcome to Egypt "Future Work is Digital" initiative. Learn more about the program and how to navigate the classroom.

## Part 2: SQL and Data Modeling for the Web

In this part, you'll be building out the data models and database for an artist/venue booking application. The fictitious startup Fy-yur is building a website that facilitates bookings between artists who can play at venues, and venues who want to book artists.

#### **Project: Fyyur: Artist Booking Site**

In this project, you'll demonstrate your new SQL and data modeling skills by creating a site to help coordinate bookings between artists and venues.

<sup>\*</sup> This is a self-paced program and the length is an estimation of total hours the average student may take to complete all required coursework, including lecture and project time. Actual hours may vary.

Lesson	Summary
Course Introduction	Understand what this course will cover and the learning objectives achieved.
Interacting with Databases	Interact with relational databases. Review SQL and the Client-Server Model. Use Postgres, understand DBAPIs, and use psycopg2.
SQLAlchemy Basics	Learn to use SQLAlchemy and SQLAlchemy ORM to work with a relational database in Python.
SQLAlchemy ORM in Depth	Get to know Model.query and the SQLAlchemy Object Lifecycle to master how to query for and change records in a database.
Build a CRUD App with SQLAlchemy - Part 1	Build out the ability to read and create todo items in our To-do app, handling changes from the database to the views.
Migrations	Handle changes to your database schema over time using a version control system involving migration files.
Build a CRUD App with SQLAlchemy ORM - Part 2	Finish developing our To-Do app with update and delete functionality. Model relationships with To-Do lists.

## Part 3: API Development and Documentation

In this part, you will use the skills you've developed to build a Trivia API. The goal of this project is to use APIs to control and manage a web application using existing data models. You'll be given a set of data models and the application front end. Your task will be to implement the API in Flask to make the Trivia game functional.

## **Project: Trivia API**

In this project, you'll use your new API and API documentation skills to build a trivia API.

Lesson	Summary
Introduction to APIs	In this lesson, you'll learn what APIs are, how they're implemented, and why they're important. We'll also dive into the concepts of Internet Protocols and REST.
HTTP and Flask Basics	In this lesson, you'll learn about HTTP—including methods, requests, responses and status codes— as well as how to set up a Flask app, and implement and test endpoints using Curl.
Endpoints and Payloads	In this lesson, you'll learn about how Flask is extensible in itself to handle different kinds of methods, more complex endpoints, and to return formatted data to the client.
API Testing	This lesson teaches students the benefits and purposes of testing an API, Test-Driven Development for APIs and implementing the tests using unittest.
API Documentation	To round out the course, students will consider and write API documentation and project documentation so their projects can be hosted, shared, and used by other developers with clarity.

## Part 4: Identity and Access Management

In this part, you will build the backend for a coffee shop application. You'll add user accounts and authentication to your application and use role-based access management strategies to control different types of user behavior in the app.

#### **Project: Coffee Shop Full Stack**

In this project, you'll demonstrate your new authentication and authorization skills by creating a full-stack application for a coffee shop menu.

Summary
Set the groundwork for understanding information security and refresh your understanding of the technologies used in future lessons.
Explore frequently used methods of identifying who is making requests on web systems. Implement modern software patterns to accomplish this goal across the stack.
Understand and overcome common pitfalls of the ubiquitous password authentication design pattern.
Limit access to specific resources or actions by restricting requests only to authorized request to particular users and groups of users. Implement role-based access controls (RBAC) across the stack.
Stay one step ahead of attackers by implementing a secure development process and knowing how to keep informed on the cutting edge of security research.

# Part 5: Digital Freelancing - Intro

Get introduced to the world of digital freelancing.

## Part 6: Digital Freelancing - Pro

Get started with digital freelancing and submit your first proposal.

**Project: Conquer the freelancing marketplaces** 

Lesson	Summary
مفطط البرنامج	Welcome to the "Digital Freelancing - Pro"! In this part, we will hone your soft skills in order to be able to communicate with your client. You'll learn how to write a project proposal to win your
الهنصات التفصصية	ستتعرف على أهمية مو اقع المنصات التخصصية Github, Behace, Dribbble, Stack Overflow, Kaggle, مثل للاستفادة من تجارب الآخرين و ايضا للترويج لعملك كفري لآنسر في المكان المناسب
